

Dear Parent and Student,

Portraits of the Forney ISD JROTC are still available for viewing and purchase at an online gallery.

But don't delay- The 15% Early Bird Discount will expire on 10/11/23!

(All portraits will still be available for purchase after this date.)

To view this gallery, [click here.](#)

Or copy and paste this URL into your browser:

<https://pixelprairieimagingervices.shootproof.com/gallery/22381481/>

This gallery can also be found by going to PixelPrairie.com and clicking on the Galleries/Composite Portraits tab. Just locate your group and click on the name.

Each student has their own album of poses. They are alphabetized by first name.

Make sure to make use of the image editing tools available to crop your image exactly as you wish it to appear.

Proofs are not retouched, but all print products will be retouched. This includes, blemishes, shine, any red skin hue, and minor uniform retouching.

Name embossing on prints 5"x7" and larger is now available. Just click on the "Add-ons" tab in your cart.

A Special Offer!

Purchase at least one retouched photo file and receive a free photo app for your smart

phone or tablet that displays your entire album of poses. You can share this app with others.

(Note: photos are not able to be downloaded out of the app and images are not retouched.)

An email will be sent to you after purchase with instructions- a couple of clicks and the app is on your phone.

Questions about Print Paper?

Prints are offered in several different print surfaces. Here are brief explanations about each.

"Lustre" - Professional photo paper with a fine grain pebble texture, similar to a matte finish.

"Glossy" - professional photo paper with a glossy finish.

"Metallic" - Has a glossy finish and metallic appearance that creates images with exceptional visual interest and depth. In addition to delivering rich, vibrant colors and flattering flesh tones, this paper offers century-plus image stability.

What are "Metals?"

Metal prints represent a new art medium for preserving photos by infusing dyes directly into specially coated aluminum sheets. Because the image is infused into

the surface and not on it, your images will take on an almost magical luminescence.

It was a wonderful experience photographing these students. We hope these portraits will be enjoyed for years to come.
